IMPORTANT VACCINES DURING PREGNANCY

**Tdap**

- tetanus
- diphtheria
- acellular pertussis (whooping cough)

Pregnant women and those around them get the Tdap vaccine to protect their unborn babies.

**Get the vaccine during pregnancy**

1. 1st trimester
2. 2nd trimester
3. 3rd trimester

- Each dot represents 1 week of pregnancy.
- Single dose of Tdap vaccine recommended during this period of pregnancy.

**Who else should get the vaccine?**

Those who will be around the baby frequently should also be up to date on pertussis vaccination:

- dad
- grandparents
- siblings
- caregivers
